

Connect every AI tool. Control what it can do.

Your team is already using AI in a dozen places. Greyrox gives every tool and agent its own identity, permissions scoped to each action, and a review gate before anything sensitive happens — logged and priced as it runs, so you can say yes to the next workflow instead of quietly hoping.

ILLUSTRATIVE VIEW OF THE GREYROX DASHBOARD

HOW IT WORKS — 01 · UNDERSTAND

Classify what it actually is

Each workflow is tied to its real EU AI Act tier and its own open actions, with permissions and an audit trail applied as it goes.

HOW IT WORKS — 02 · ACT

Roll it out safely

Every workflow — your team's idea or ours — goes through the same policy check before it can touch a live system. Approved actions run, anything sensitive pauses for a person.

Client Onboarding Assistant

Awaiting approval

Send the onboarding welcome email to our new client.

Drafted the welcome email from our template. It goes directly to a person outside the company, so I'm holding it for your approval — that's the Article 50 transparency requirement on this workflow, and your client-communications policy asks for a named sender.

THE REVIEW GATE IN ACTION — CLIENT ONBOARDING ASSISTANT, HELD FOR APPROVAL UNDER ARTICLE 50

THE DATES MOST OF THE MARKET STILL GETS WRONG

The AI Act's Digital Omnibus amendment — **Regulation (EU) 2026/1744** — entered into force on 27 July 2026. It pushed high-risk obligations under Annex III to **2 December 2027** and Annex I to **2 August 2028**, while **Article 50 transparency** still applies from 2 August 2026. Article 4 now asks for AI-literacy measures rather than a guaranteed level, and Article 5 gains two new prohibitions from 2 December 2026.

Which obligations land on you depends on whether you built the system or deploy a vendor's. Greyrox works that out per workflow, so you're not guessing, and so the answer survives being asked by an auditor.
